

Creating a Comment

```
print('hello friend') # anything after hashtag is a comment and is NOT executed
# use comments to explain your code as necessary
# print('hello amiga') # don't execute this print statement
```

[1] ✓ 0.9s

Python

... hello friend

Multi Line Comments

```
# This is comment line one
# that extends to this second line
# and yes, one more line
print('hello friend')
```

[2] ✓ 0.5s

Python

... hello friend

Multi Line Comments w/ String Literals (Uses Triple Single or Double Quotes)

```
...
This is a comment using single triple quotes
And I can have as many lines as I want
To make my code more readable for myself
And for others that may work with my code in the future
...

print('hello friend')
```
